< How to scan the artifacts

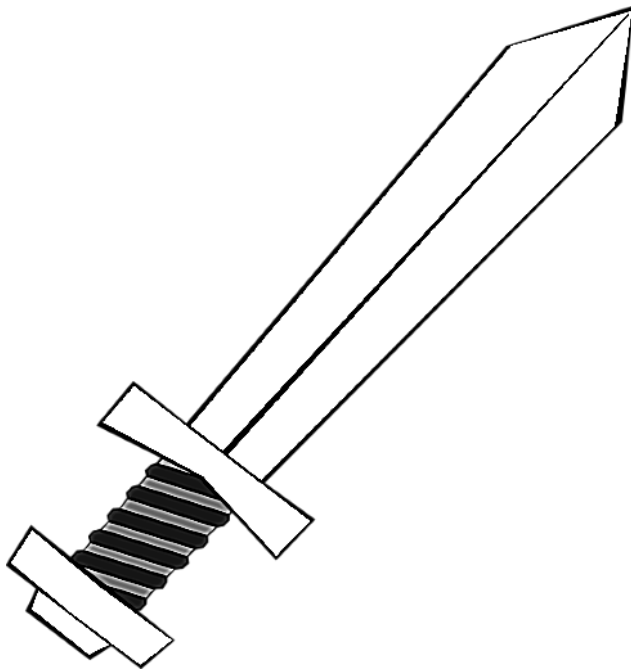

How to scan the artifacts
The first step is to
prepare the artifact
by cleaning it and
removing any debris.
Then, you can use the
scanner to capture the
data. The scanner will
create a 3D model of the
artifact, which can be
used for analysis and
documentation.

There are many ways to use the video player. You can play the video, pause it, or skip to the next video. You can also adjust the volume and enable full screen. The video player is a useful tool for watching videos on your device.

Artifact name

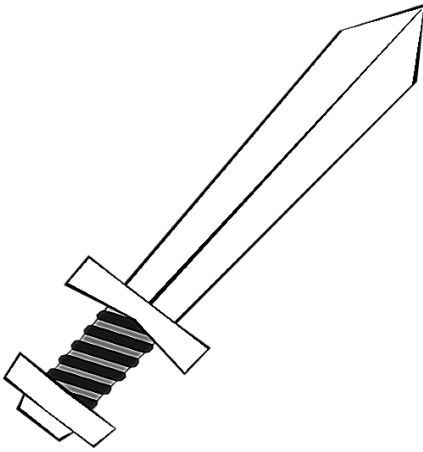

Artifacts are objects that have been created by humans and are used to represent data. They are often used in the form of a list or a table. The artifacts are often used to represent data that is not directly visible to the user. For example, a list of artifacts might be used to represent a list of items that are not directly visible to the user. The artifacts are often used to represent data that is not directly visible to the user. For example, a list of artifacts might be used to represent a list of items that are not directly visible to the user. The artifacts are often used to represent data that is not directly visible to the user. For example, a list of artifacts might be used to represent a list of items that are not directly visible to the user.
